What We Do

We envision the automation of quality inspection, thereby improving the efficiency of production, and providing an economic boost.

Building client specific API for accurate and early defect detection to reduce costs.

Using transfer learning to differentiate between defects which appear visually similar.

Tracking each product and the stages where defects are maximum to optimise production

What We Are

We are a team of passionate and diverse people combining deep expertise in machine learning, computer vision, and quality management in the field of manufacturing.

McDefect Solutions brings forth the AI-powered defect detection & categorization solutions for industries that cater to the initial stages of manufacturing.
